

## SMART MANAGER

# TOSHIBA

The **TOSHIBA** Smart Manager BMS-SM1280ETLE has the same hardware control function as the BMS-SM1208HTLE central controller, but also has the ability of control from a local area network and with the use of an additional Interface, it is capable of energy monitoring and report creation functions. This controller is ideal where advanced control, energy monitoring, advanced scheduling or access to individual air conditioners is required from a networked computer system.

- Same Hardware control features as the BMS-SM1208HTLE Controller
- Can be connected to a single PC or LAN to allow advanced control functions from a multi-language web browser display screen
- Energy monitoring and report creation functions available
- Advanced operation and master schedules can be set on a calendar
- Additional digital I/O device available
- Thin profile controller and separate power supply unit enables easy installations

### Data analyzer

On a connected locally supplied personal computer it is possible to view data analysis and energy monitoring.

Advanced operations and settings can be managed with this tool: Set temperature restrictions, save operation modes, peak cut controls on condensing unit.

A set of graphs and detailed reports will help to easily monitor the performance of the system.
